

Download Garmin G3000 Pilots Manual

The Garmin G1000 is an integrated flight instrument system typically composed of two display units, one serving as a primary flight display, and one as a multi-function display. Manufactured by Garmin, it serves as a replacement for most conventional flight instruments and avionics. Denali's cockpit comes with Garmin's G3000 avionics suite, which offers three 14-inch diagonal widescreen LCD displays, as well as two touch-screen control panels. The Company was established in the early 1940s, the first design project was a single-seat trainer, designated P-1 but it was abandoned before being built. The SOCATA TBM is a single-engine turboprop-powered low-wing monoplane, capable of seating a maximum of seven people. It is composed mainly of aluminium and steel construction, but with the tail surfaces built of Nomex honeycomb. The wing features a very effective Fowler flap, comprising 80 per cent of the trailing edge's span, for the purpose of lowering the aircraft's stall speed.
