

Download Neural Networks And Intellect Using Model Based Concepts

In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. Computer science defines AI research as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving ...Introduction. DevConf is a community-driven, developer focused, one-day conference hosted annually. The aim of the conference is to provide software developers with a buffet of tools, practices and principles applicable to tackling current and future challenges in the South African software development environment. By "augmenting human intellect" we mean increasing the capability of a man to approach a complex problem situation, to gain comprehension to suit his particular needs, and to derive solutions to problems. By creating user interfaces which let us work with the representations inside machine learning models, we can give people new tools for reasoning.
