

Download Personal Learning Networks Connections Transform

Artificial neural networks are inspired by the ability of brains to learn complicated patterns in data by changing the strengths of synaptic connections between neurons. What separates successful leaders from the rest of the pack? Networking: creating a tissue of personal contacts to provide the support, feedback, and resources needed to get things done. Deep learning (also known as deep structured learning or hierarchical learning) is part of a broader family of machine learning methods based on artificial neural networks. In recent years, deep artificial neural networks (including recurrent ones) have won numerous contests in pattern recognition and machine learning., Personal Learning Networks Connections Transform.
