Breast augmentation and augmentation mammoplasty (colloquially known as a "boob job") are plastic surgery terms for the breast-implant and the fat-graft mammoplasty approaches used to increase the size, change the shape, and alter the texture of the breasts of a woman. A breast implant is a prosthesis used to change the size, shape, and contour of a person's breast. In reconstructive plastic surgery, breast implants can be placed to restore a natural looking breast mound for post-mastectomy breast reconstruction patients or to correct congenital defects and deformities of the chest wall. Reconstructive hand surgery can help correct a wide range of functional and cosmetic problems affecting your hand, wrist and forearm. Hand reconstruction can repair tendon injuries, birth defects and joint deformities caused by rheumatoid arthritis (RA).
