

Download RHEL Administration Guide

Sample postfix session [root@mail ~]# telnet mail smtp Replace mail with the name of your server. We should not use localhost since localhost is a trusted client ip address. And make sure the domain name you specified does not resolve to 127.0.0.1 which is the IP address of localhost. In this step, you will download Red Hat Enterprise Linux Server. For the download, you will need to register with developers.redhat.com. After you register as a developer, you will be given a subscription for Red Hat Enterprise Linux Developer Suite. Register. If you are a new customer, register now for access to product evaluations and purchasing capabilities. Need access to an account? If your company has an existing Red Hat account, your organization administrator can grant you access. Starting and stopping services is easy in Red Hat Enterprise Linux 6 and its derivative CentOS 6. Both includes the Service Configuration tool which simplifies service administration.
