chapter 3 balance of payments suggested answers and solutions to end-of-chapter questions and problems questions 1. define the balance of payments. The variables p and q are assigned references to two new Point objects. A function like Turtle or Point that creates a new object instance is called a constructor, and every class automatically provides a constructor function which is named the same as the class.. It may be helpful to think of a class as a factory for making objects. The class itself isn't an instance of a point, but it ...We would like to show you a description here but the site won't allow us. I feel the need to disclaim that certain parts of this chapter are not meant as "bashing". It's not that I have a grudge, the story just writes itself and once you start dropping anvils on a character it's hard to stop.
